

A. Pod-induced nutritional attribution

All planned ART-C contrasts: pHolm < .001

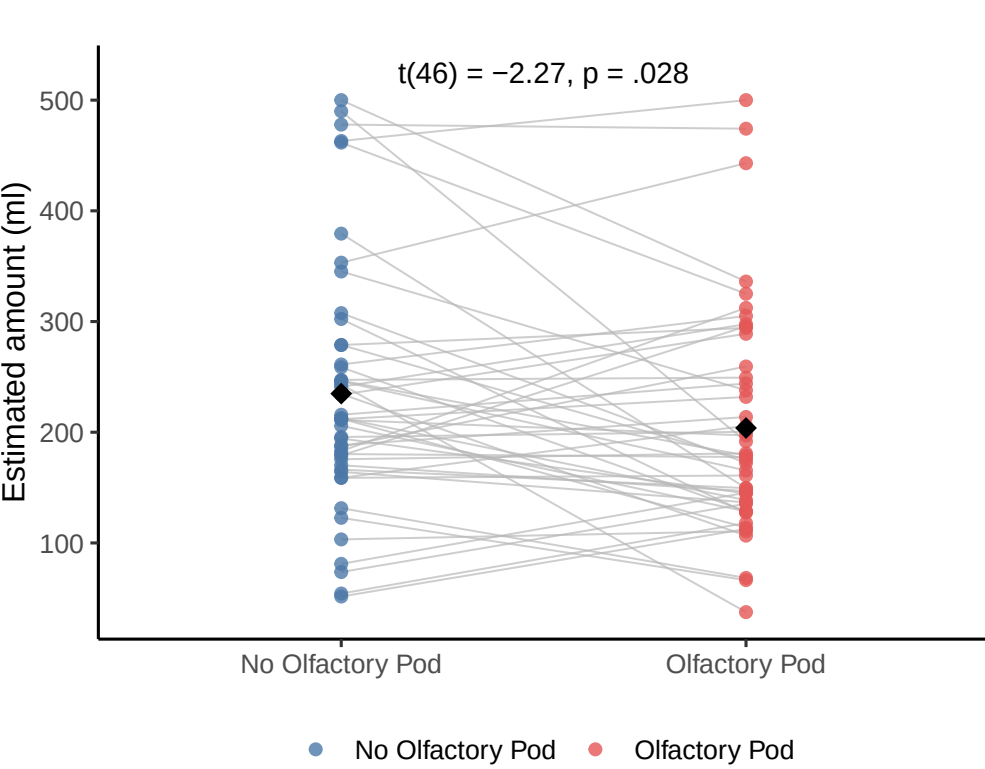

B. Pod-induced taste profile

FDR-corrected ART-C comparisons

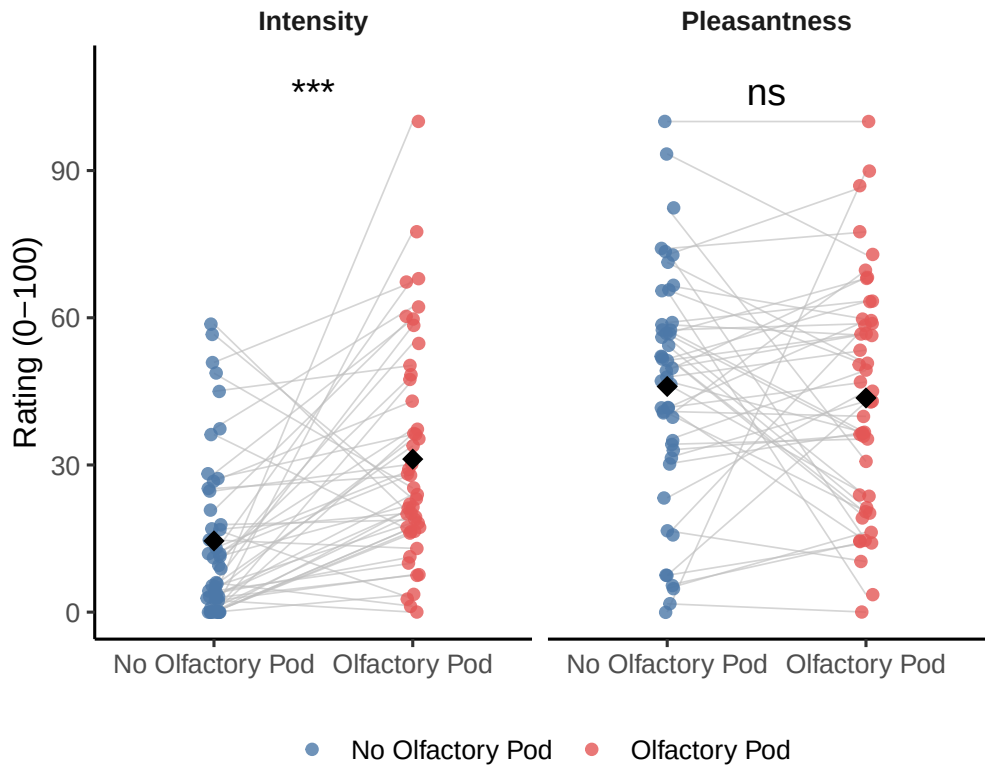

C. Estimated amount consumed

Actual intake was fixed at 200 ml

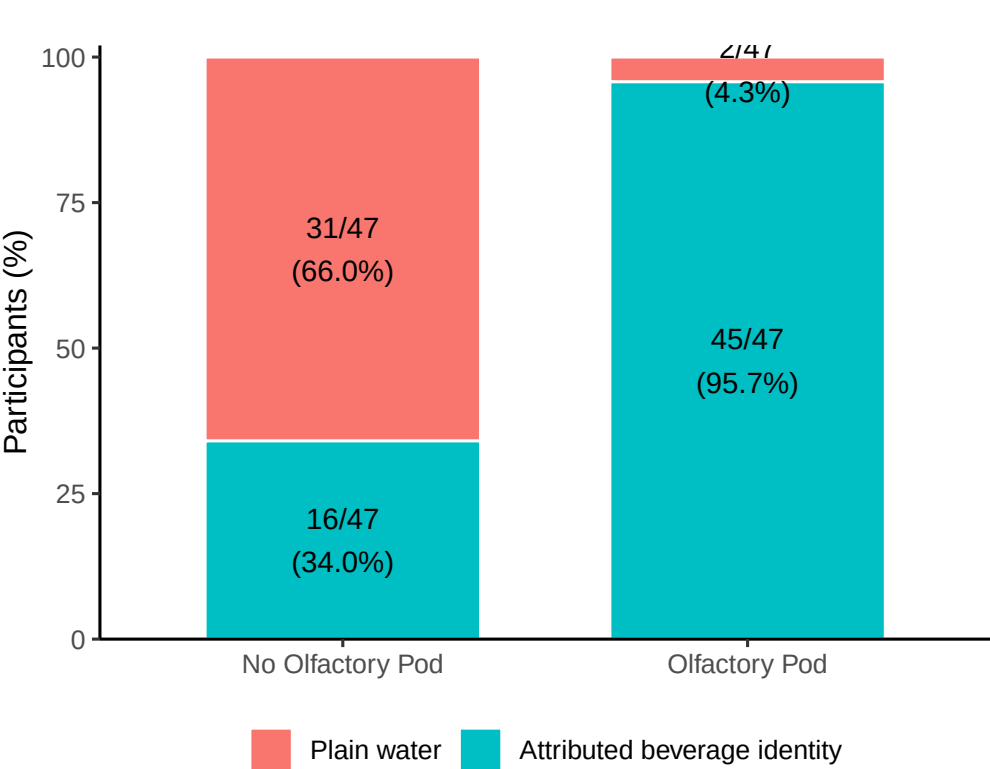

D. Intensity and pleasantness

Paired Wilcoxon signed-rank tests

E. Open-ended beverage identity

Binary coding of plain water versus attributed beverage identity

*** p < .001; ** p < .01; * p < .05; ns = non-significant. Nutritional and taste analyses use ART/ART-C.
